ABOUT ME

Full-Stack Developer experience in building AI-powered web applications using modern technologies across frontend and backend development. Skilled in developing scalable, user-focused solutions with strong foundations in problem-solving, databases, and API design. Passionate about adopting new technologies, exploring emerging domains, and continuously learning to build impactful solutions.

SKILLS

Languages: C, C++, Java, Python, JavaScript, HTML, CSS, SQL, TypeScript

Frontend: React.js, Redux, Bootstrap, Tailwind CSS

Backend: Redis, Node.js, Express.js, FastAPI, MongoDB, Django

Tools & AI Technologies: Git, GitHub, Postman, Docker, Langchain, LangGraph

Core Skills: DSA, DBMS, Operating Systems, Computer Networks, API Design

Soft Skills: Problem Solving, Analytical Thinking, Adaptability, Continuous Learning

Currently Learning: Cloud Fundamentals, Docker, System Design

EDUCATION

L.D. College of Engineering, Ahmedabad

B.E. in Computer Engineering

July 2023 – Present

CPI: 8.4

EXPERIENCE

Frontend Intern — Prodigy InfoTech (Online)

June 2025

- Built 5 responsive websites using HTML, CSS, and JavaScript.
- Received Certificate of Recommendation.

Full Stack Intern — CodeAlpha (Online)

August 2025

- Developed a Social Media Clone using MERN stack. | Built an E-commerce Clone using Django.
- Received Certificate of Recommendation.

PROJECTS

InterviewAI – AI-Driven Interview Preparation System [GitHub]

- Developed an AI-powered web application that helps candidates prepare for interviews by analyzing resumes and job descriptions to generate personalized interview preparation reports.
- Built using React 19, Redux Toolkit, and Tailwind CSS for the frontend, and Node.js/Express with MongoDB for a scalable backend; implemented secure JWT cookie authentication, protected routes, and PDF upload functionality using Multer.
- Integrated Gemini AI to provide job match scoring, technical and behavioral interview questions, skill gap identification, and structured preparation roadmaps tailored to user profiles; enhanced usability with AI-generated resume PDFs and report history tracking.

Research Agent – Multi-Stage AI Research Pipeline [GitHub]

- Engineered an authenticated FastAPI backend running an asynchronous background research pipeline that orchestrates sequential web search, document ingestion, draft generation, and agent-based critique using LangChain, Google Generative AI, and Tavily.
- Implemented secure JWT user authorization and a persistent SQLite database using SQLAlchemy to manage real-time job statuses, log structured lifecycle metrics, and store final research answers alongside source artifacts.

CloudBox – Cloud File Storage and Sharing Platform [GitHub]

- Developed a cloud-based file management platform enabling users to securely upload, organize, preview, and share files through a hierarchical folder system with nested directories and public shareable links.
- Built using React, Node.js/Express, MongoDB, and Cloudinary; implemented JWT-based authentication, protected routes, file uploads with Multer, expiring links, real-time notifications using Socket.IO, and integrated image/PDF previews.

Q-Classify – AI-Powered PDF Analyzer [GitHub]

- Developed an AI-powered Streamlit application that analyzes syllabus and question paper PDFs to classify questions by chapters and concepts, enabling trend analysis, difficulty estimation, and structured report generation.
- Built using Python, Streamlit, LangChain, and Google Gemini, implementing PDF text extraction, AI-driven content analysis, data visualization, and automated PDF report generation for efficient academic insights.

ACHIEVEMENTS & CERTIFICATIONS

- In top 4% at **GirlScript Summer of Code (GSSoC) 2026**, contributing to open-source projects and collaborative development.
- Earned the **Postman API Fundamentals Student Expert** certification
- Successfully completed the **Google Cloud Study Jam** organized by **Google Developer Group (GDG)**
